

Elevate your patient care with vmrdSAA

In-Clinic Test

for rapid, objective assessment

Numerical results

with handheld reader

Serum amyloid A (SAA) is an acute phase protein that increases with acute systemic inflammation. As a biomarker, it is particularly valuable to help diagnose infection and other severe inflammatory diseases, by narrowing your differential list and objectively monitoring efficacy of subsequent treatment. Currently used in horses and cats, veterinarians can now utilize this valuable tool in their canine patients with the VMRD SAA product for Canine!

Multiple tests, one **handheld** reader - now with **RECHARGEABLE** battery!

- ✓ Ideal size with convenient storage case
- ✓ Calibration for accuracy & consistency
- ✓ Will not lose your results
- ✓ Automatically reads test results at 10 minutes
